

ERGO COOLING 37.5®

The MEGAComfort Ergo Cooling Insole takes our trusted anti-fatigue base and introduces 37.5® Technology. The science-backed solution for helping maintain ideal foot temperature. Designed with cushioned heel and arch support, it works hard to reduce strain, while the 37.5® top cloth actively removes heat and moisture before they build up. In independent on-body testing, insoles with 37.5® technology reduced apparent temperature inside footwear by up to 9°F (5°C) compared to traditional designs, keeping feet cooler, drier, and more energized hour after hour. Perfect for workers who stand, walk, and move nonstop in hot or unpredictable conditions. Comfort isn't just felt. It's measured.

Cushioned Heel & Arch Support

Patented* Dual-Layer Memory Foam
