

STRAIGHT FROM THE SOURCE

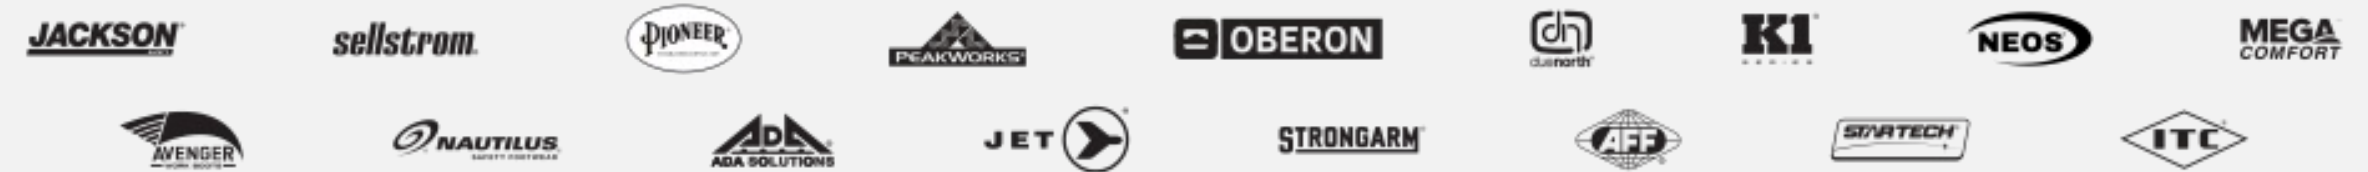

THE SUREWERX FAMILY

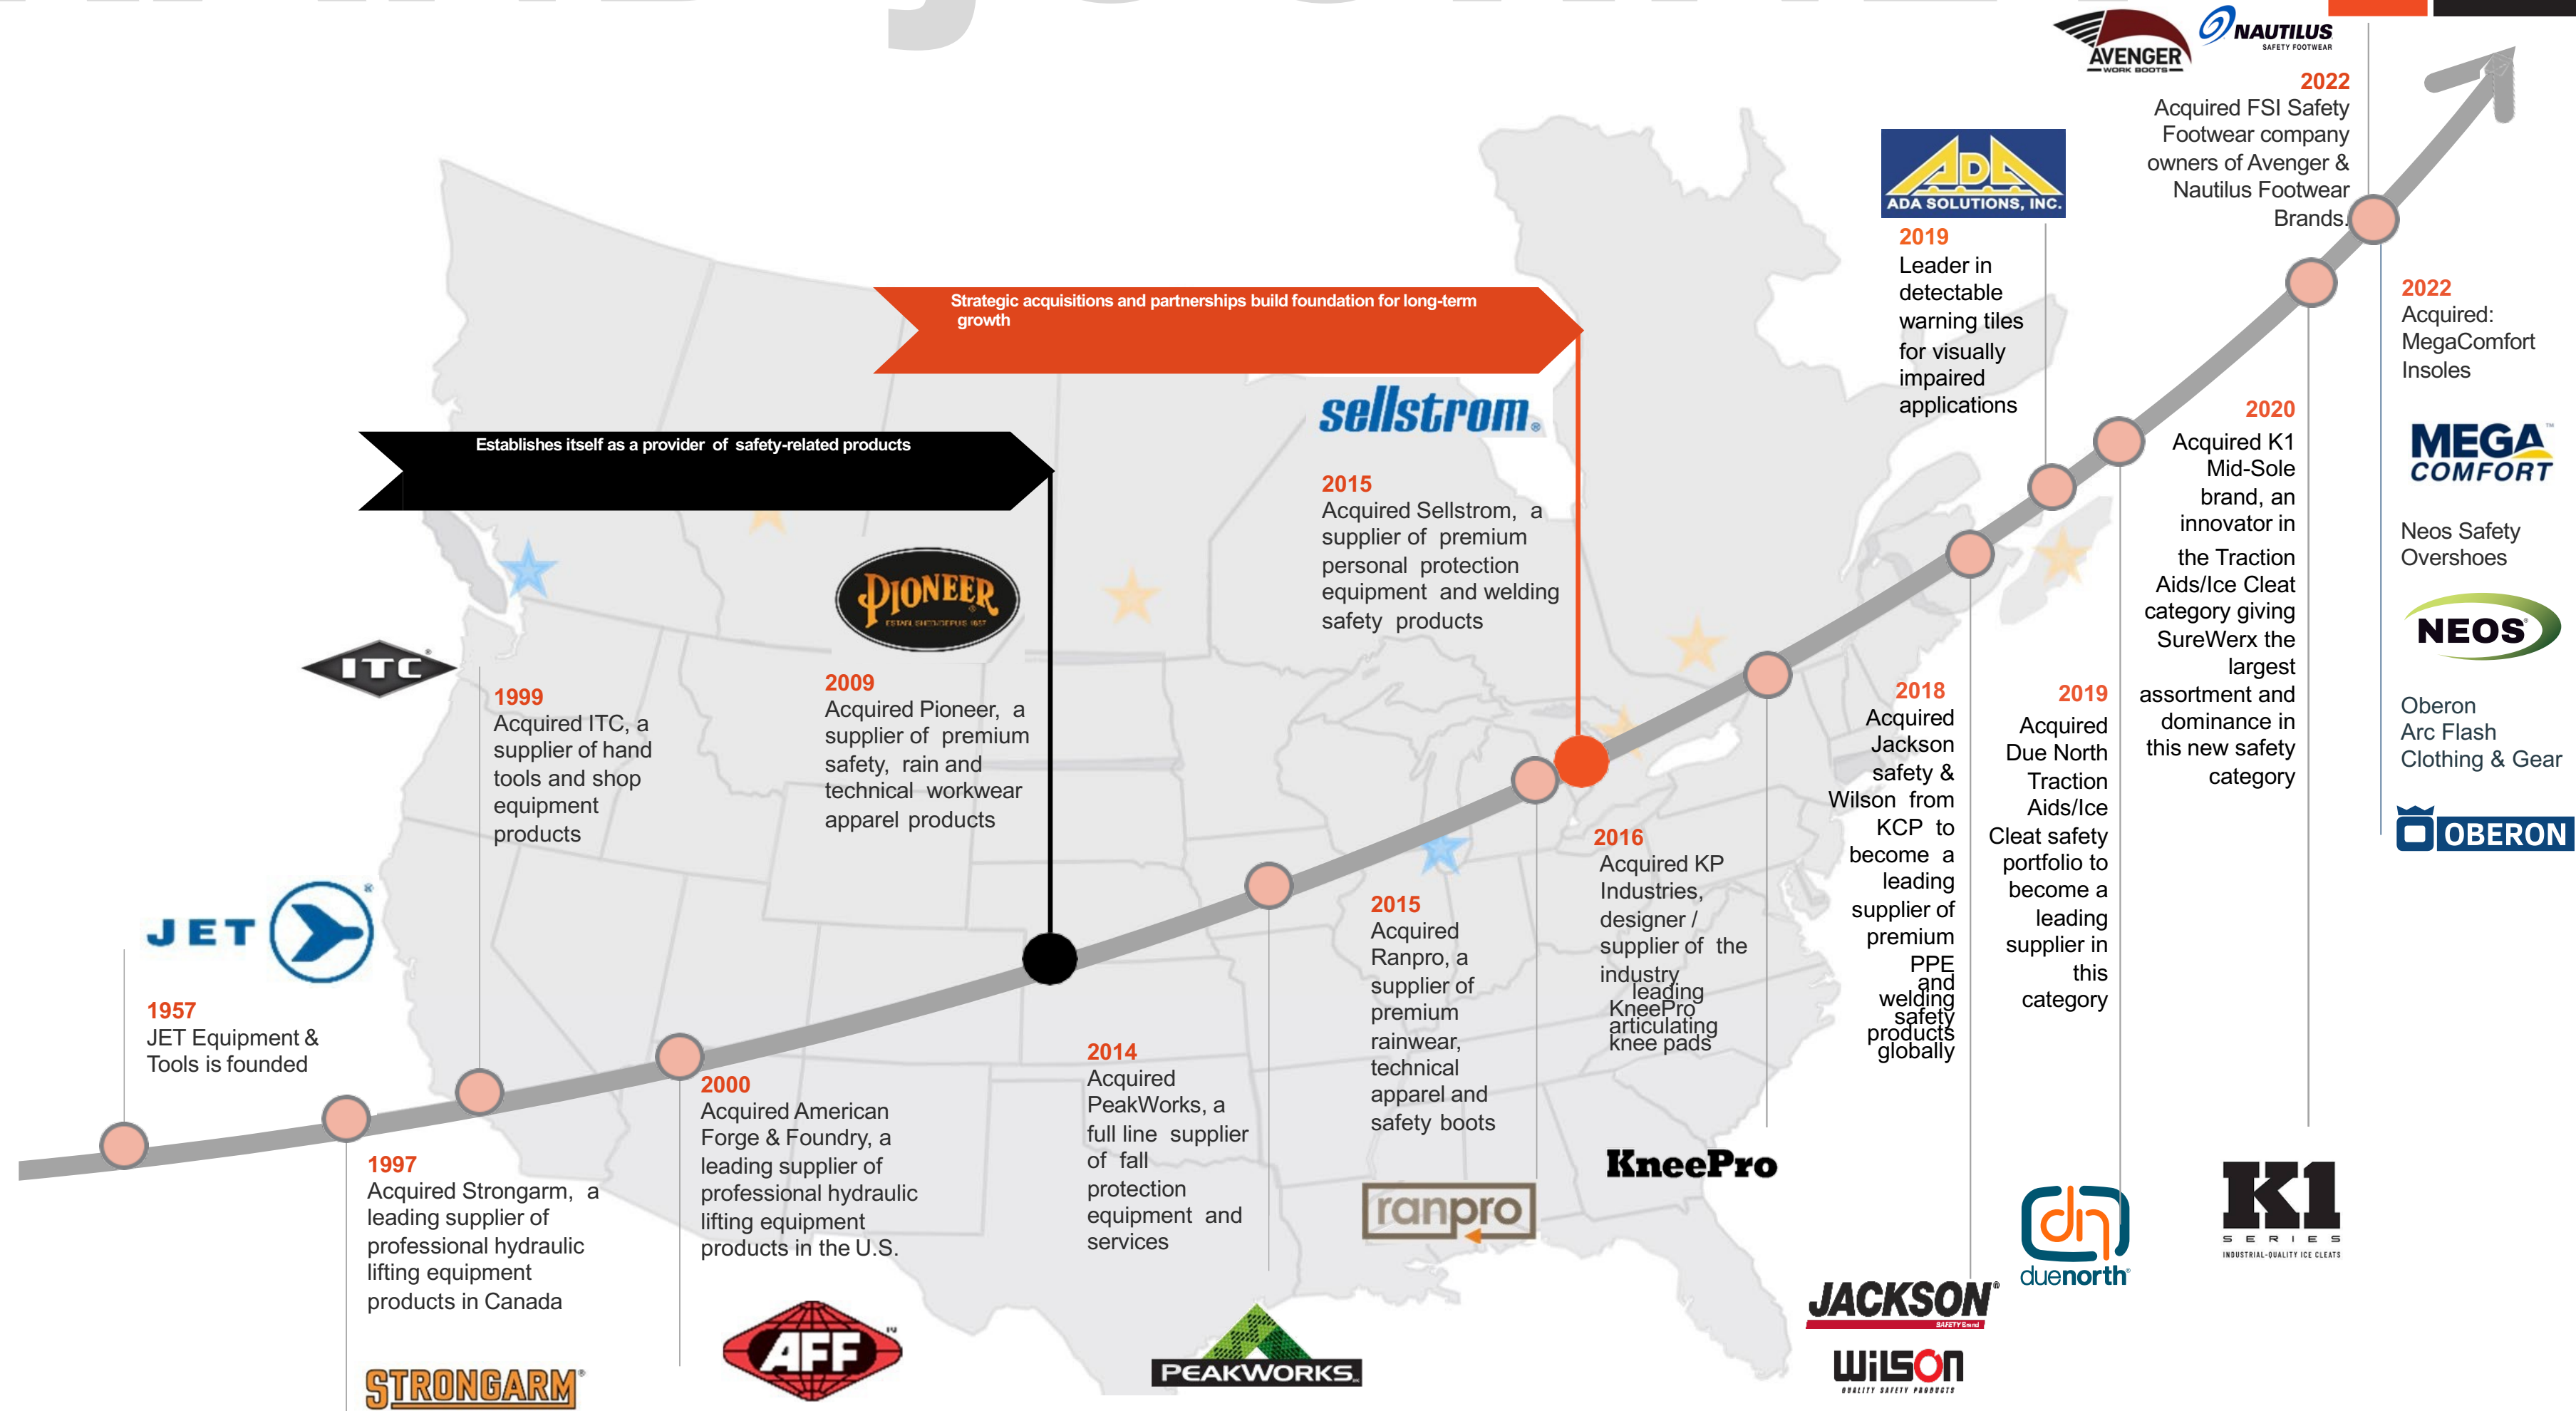

- SureWerx is a global manufacturing partner to distribution leaders across several verticals including industrial, manufacturing, construction, healthcare, food processing, utilities, resources, transportation, and automotive aftermarkets.
- The SureWerx family of brands hold top market positions in North America and EMEA, enabling us to drive end-user demand.
- Our brands bring 13,000+, innovative, quality controlled, solutions-driven products to market.
- The SureWerx advantage is a result of being a unique, single-source provider of branded innovative head-to-toe PPE & installed surface warning solutions, along with tool and equipment products, serving as a one-stop shop for professional users across a broad spectrum of industries. This consolidation of owned brands improves efficiencies for our distribution partners and increases productivity and safety for our end customer.

OUR BRANDS

BRAND JOURNEY

EVERYTHING IN HOUSE

Oberon has the unique ability to create innovative safety solutions from concept to creation. With **in-house expertise** in design, manufacturing, testing, and safety standards we are able to **solve real world problems** and create products that help meet the needs of the worker.

360[°]

ARC FLASH PPE

We are the only manufacturer of arc flash PPE that makes all aspects of our suits. **We do the injection molding as well as the cut and sew.**

We even have proprietary fabrics that we created. Everyone else buys shields from one source and off the shelf fabric from another source and then puts it all together. So, you could say we are **the only 360 degree manufacturer of arc flash PPE.**

UNBEATABLE LEAD TIME

Oberon maintains readily available inventory of all top selling products. **Over 80% of Oberon's product line can be shipped within 1-2 days** upon receipt of an order. Large volume orders for hundreds of Arc Flash Suits take only 2-3 weeks manufacturing lead time.

Oberon's lead time is a significant advantage over its competitors because all Oberon Arc Flash PPE is manufactured at its own ISO 9001 **manufacturing facility in New Dartmouth, MA, USA**. Everything from designing its own arc-rated fabrics, onsite quilting capabilities, production line stitching automation and injection molding operation are **100% controlled by Oberon** at one single manufacturing site location.

Custom orders are handled with ease with **short lead times** and complete professionalism. This includes customer specific designs and having no limitations on garment size dimensions. Oberon has provided suits up to 8XL TALL for utility workers.

PRODUCT DESIGN

For over 15 years, **Oberon's product development was led by Dr. Tom Neal, Ph.D.** Now retired, Dr. Neal worked for DuPont in the thermal protective fiber divisions, before joining Oberon as technical advisor. Tom was **instrumental to helping create the electrical safety industry** as we know it today. For example, Tom created the Hazard/Risk Categories in the late 1990's and determined the minimum level of protection for each category based on what Oberon had available at the time (40 cal/cm² suits were the most protective system available).

MANUFACTURED IN THE USA

Oberon products are **proudly manufactured in New Bedford, MA, USA**. Oberon's factory is an accredited ISO 9001 manufacturing facility. The scope of Oberon's ISO 9001 registration includes manufacturing of safety products and arc flash protective garments including clothing for electrical and gas utility workers, as well as heat reflective garments, face shields, spectacles and related products.

BRAND NEW

FACILITY

This new larger space has allowed us to **increase our production capacity** as well as improve our ability to innovate new products.

QUALITY CONTROL

Our products are better than ever with our **new ISO 9001 accredited quality control team.**

PRODUCT TESTING

Unlike any other manufacturer, Oberon is fully capable of designing custom arc-rated fabric and shield lens technologies. Oberon is the only manufacturer that **performs its own testing at both Kinectrics and Aitex (Spain) laboratories.** We evaluate material response for breakopen, melting, dripping, deformation, afterflame time, shrinkage and ignition.

EXPERTS IN SAFETY

We are deeply involved in many safety standards committees and **have voting rights on ASTM F18, F23, CSA and CSA Z462 Committees.** In addition, we are **active in IEEE, NFPA 70, National Safety Council, and the American Gas Association.** This allows us to be close to the latest standards changes and develop products that are continuously improving the safety and welfare of the worker using them.

NO COST TRAINING

Oberon offers **no-cost Care & Use product training** and support for end user customers. Each session is scheduled for 1-Hour. Using an available Oberon sizing kit, workers can try on sizing garments during the training session. Oberon and its Distributor will facilitate the course(s) as either a traditional training session (online or in person) or as a Train-the-Trainer program.

WE WELCOME

FEEDBACK

We're always listening to feedback and industry challenges to help **bring new products and innovations to market** and make continuous improvements to our existing products.
