

3-TON OFF-ROAD FLOOR JACK

Engineered for the power, reach, and reliability serious off-road enthusiasts demand.

Out on the trail, miles from pavement and cell service, the last thing you expect is a flat tire—but that's exactly when a true off-road floor jack earns its place in your rig. That's where the AFF 3000R Off-Road Jack comes to your aid as it rolls easily over rocks, dirt, and uneven ground, lifting your vehicle with steady confidence. Its oversized wheels bite into the terrain, the long handle gives you control and leverage, and the light-weight, heavy-duty aluminum frame takes the weight of lifted trucks and SUVs without hesitation. Whether you're rotating tires at camp, swapping a damaged wheel after a hard crawl, or making a quick repair before the next stretch of trail, this is the jack built for places where standard shop equipment can't follow—because when adventure takes you off the road, your tools need to be just as capable.

3-TON OFF-ROAD FLOOR JACK

Introducing the 3-Ton Off-Road Floor Jack—engineered for the power, reach, and reliability serious off-road enthusiasts demand. With a maximum lift height of 28.74 inches (with extension adapter), this jack offers exceptional access to a wide range of lift points on lifted trucks, Jeeps, and other off-road vehicles. The adjustable locking adapter provides three secure height settings and includes a rubber saddle pad for enhanced grip and stability across different frame or axle surfaces. A wrap-around steel skid plate keeps the jack stable in sand, gravel, dirt, and other soft terrain, preventing it from sinking or shifting under load. The handle lock detent ensures easy, safe positioning beneath the vehicle, while heavy-duty composite off-road wheels deliver smooth, controlled movement over uneven ground. Built with a hybrid steel and aluminum construction, this jack combines strength with a lightweight design, making it both durable and easy to maneuver or store—the perfect companion for off-road adventures, shop use, or field repairs.
