

# ERGO DIABETIC

MEGAComfort's Ergo Diabetic Insole features an ergonomic design incorporating a unique triple-layer technology. This includes patented high-density dual-layer 100% memory foam and an EVA top layer. The EVA top layer is particularly beneficial for users with diabetes, as it provides enhanced shock absorption and ensures even pressure distribution, effectively relieving pressure from sensitive areas. Ergo Diabetic Insoles offer superior comfort and support for both stationary and mobile workers, catering specifically to the needs of those with diabetes.

## THE PROBLEM:

-  People with diabetes often experience foot sensitivity, requiring extra care to avoid pressure points and foot injuries.
-  Standard insoles may lack the necessary support and shock absorption, increasing discomfort and health risks for diabetic individuals.

## WHY IT'S IMPORTANT:

-  **REDUCES PRESSURE AND PAIN:** Evenly distributes weight across the foot, alleviating discomfort and reducing the risk of pressure-induced injuries.
-  **ENHANCED SHOCK ABSORPTION:** Protects sensitive areas from impact, essential for diabetic foot health and comfort.
-  **ALL-DAY COMFORT AND SUPPORT:** Designed to improve overall foot health, making it suitable for those who spend long hours on their feet.

## THE SOLUTION: ERGO DIABETIC INSOLES

-  **TRIPLE-LAYER TECHNOLOGY:** Combines patented high-density dual-layer memory foam with an EVA top layer, designed for superior shock absorption and even pressure distribution.
-  **EVA TOP LAYER:** Provides targeted support and relieves pressure from sensitive areas, essential for diabetic foot care.
-  **ERGONOMIC DESIGN:** Offers maximum comfort and stability for both stationary and mobile workers.
-  **CUSHIONED HEEL & ARCH SUPPORT:** Cushioned support reduces fatigue, providing all-day comfort while working.
