WARRANTY POLICY

JET EQUIPMENT AND TOOLS LTD. (JET®) makes every effort to ensure its products are manufactured to the highest standards and are guaranteed against defects in materials and workmanship when the product is used for the purpose for which it was designed. This guarantee applies only to JET products purchased new from a JET authorized distributor.

JET product warranties are extended to the original retail purchaser only. This warranty does not apply to any product showing signs of abuse, misuse, alteration, or having been improperly maintained or repaired.

This warranty does not cover damage attributable to normal wear and tear.

Any JET product that fails during normal use and is within the specified warranty period for that product will be repaired or replaced at JET's discretion.

Repairs and/or replacements are warranted as described for the specific product only for the remainder of the warranty period.

Repair or replacement is the exclusive remedy for defective products under this warranty.

Warranty is expressly in lieu of all other warranties, including the implied warranty or merchantability or any implied warranty of fitness for a particular application.

Any JET product for which there is a warranty claim should be returned PREPAID to an authorized JET distributor or service centre. Authorized Warranty Depots can be found at surewerx.com

All warranty claims must be accompanied by proof of purchase and an explanation of the defect or failure.

It is the customer's responsibility to provide this information.

JET shall not be held liable for any consequential or incidental damages for breach of any expressed or implied warranty on their products. No claim for damages or any type will be considered, and all products are sold with this understanding.

Any costs incurred to obtain warranty consideration or services are the Customer's responsibility including shipping and handling, travel, lost time or lost production.

GENERAL INFORMATION ON JET CHAIN HOISTS AND PULLERS

Customs Lifts – Custom lift lengths are available, however, custom lift hoists and pullers are NOT returnable.

CAUTION: be sure that supporting structures and load-attaching devices used in conjunction with hoists, provide an adequate safety factor to handle the rated load plus the weight of the equipment. If in doubt, consult a qualified structural engineer.

This equipment is not to be used for lifting, supporting, or transporting people, or lifting, supporting, or transporting loads over people.

IMPORTANT: Before installation and operation, see maintenance and operations manual for additional warnings, precautions and operating instructions.

NOTE: Batteries supplied with certain products may have been subjected to long shelf life, resulting in low energy or a dead battery. Please source replacement batteries locally. Please follow instructions in the manuals for products using rechargeable batteries. Dead batteries do not constitute a warranty claim.

Any JET product that fails during normal use and is within the specified warranty period for that product will be repaired or replaced at JET's discretion. Repairs and/or replacements are warranted as described for the specific product and only for the remainder of the original warranty period.

Repair or replacement is the exclusive remedy for defective product under this warranty. Warranty is expressly in lieu of all other warranties, including the implied warranty of merchantability or any implied warranty of fitness

for a particular application. Any JET product for which there is a warranty claim should be returned PREPAID to an authorized JET distributor or service centre. Authorized Warranty Depots are found at surewerx.com

ALL warranty claims must be accompanied by proof of purchase and an explanation of the responsibility including shipping and handling, travel, lost time, or lost production.

These general instructions deal with the normal installation, operation and maintenance situations encountered

with the Grip Puller described herein. The instructions should not be interpreted to anticipate every possible contingency or to anticipate the final system or configuration that uses these Grip Pullers.

These instructions include information for a variety of hand chain hoists. Therefore, all instructions and information may not apply to one specific Grip Puller. Disregard those portions of the instructions that do not apply.

WARNINGS

1. Read and understand owner's manual before operating grip puller. Familiarize yourself with the content of the warning label on your puller.
2. Do not exceed rated capacity.
3. Supporting structure used with this device must provide adequate support to handle all puller operations plus the weight of the puller and attached equipment. If in doubt, consult a registered structural engineer.
4. Never use handle extensions (cheaters).
5. Do not use with twisted, kinked, frayed or otherwise damaged wire rope.
6. Do not use if grip puller is damaged or malfunctioning.
7. Do not lift people or loads over people. Always keep people clear from load path.
8. When using grip puller to lift vertically, make sure hook is centered under the puller.
9. Do not use as a tow line.
10. Do not use with a hook that is open or twisted, or without safety latch.
11. Never run wire rope over a sharp edge.
12. Never leave a suspended load unattended.
13. Do not swing a suspended load.
14. Always inspect the puller before each use. Replace if any component is damaged or malfunctioning.
15. Always use gloves when handling wire rope. Do not wear loose clothing which can become entangled in moving parts.
16. Do not use this grip puller in an explosive environment.
17. Give your work undivided attention. Looking around, carrying on a conversation and "horse-play" are careless acts that can result in serious injury.
18. Do not operate this tool while tired or under the influence of drugs, alcohol or any medication.
19. Failure to comply with the above warnings may result in personal injury and/or property damage.

INTRODUCTION

This manual is provided by JET covering the safe operation and maintenance procedures for a JET Grip Puller. This manual contains instructions on installation, safety precautions, general operating procedures, maintenance instructions and parts breakdown. This tool has been designed and constructed to provide consistent, long-term

operation if used in accordance with instructions set forth in this manual. If there are any questions or comments, please contact either your local supplier or SureWerx. JET can also be reached at our web site: www.surewerx.com

SPECIFICATIONS

Product No.	111136	111137	111138
Model No.	JGP-75A	JGP-150A	JGP-300A
Pulling Capacity (lb)	2,860	5,720	11,440
Lifting Capacity (lb)	1,760	3,520	7,040
Force Req. to raise load (lb)	64	93	99
Dimensions (L x W x H)	16-3/4" x 2-1/2" x 9"	21-1/2" x 3-3/4" x 10-1/4"	26" x 4-1/2" x 12-1/2"
Cable Diameter	5/16"	7/16"	5/8"
Net Weight (lb)	39.7	45.2	71.6

*NOTE: The above product numbers do not include the wire rope.

The above specifications were current at the time this manual was published, but because of our policy of continuous improvement, JET reserves the right to change specifications at any time and without prior notice, without incurring obligations.

UNPACKING

Open carton and check for shipping damage. Report any damage immediately to your distributor and shipping agent. Do not discard any shipping material until the Grip Puller is assembled and operating properly.

Compare the contents of your container with the following parts list to make sure all parts are intact. Missing parts, if any, should be reported to your distributor. Read the instruction manual thoroughly for assembly, maintenance and safety instructions.

ASSEMBLY AND SETUP

Pre-Lubrication

Before proceeding with assembly, lubricate the puller as follows: Apply a lubricating oil to the puller mechanisms while continuously operating the reverse lever. This will help spread the oil to the internal parts. Use special care to oil pawls and links well. A wear resistant oil is recommended.

CAUTION: Without proper lubrication, the pawls will fail to engage the wire rope, and the wire rope will not move.

Figure 1.

INSERTING WIRE ROPE

1. Release the clamp by pushing the clamp lever securely into the notch on the puller body.
2. Insert the end of the wire rope into the rope inlet at the rear of the puller. Feed the wire rope through until it emerges at the other end.
3. Pull the wire rope through by hand to take up the slack and make sure the exit point is not obstructed.
4. While keeping the wire rope taut, push down on the clamp lever and allow it to spring back to its natural position. This will engage the wire rope within the puller.
5. Mount the telescopic handle to either the forward or reverse lever, according to the action desired. Rotate the handle until it is secure on the lever.
6. The puller is now ready to operate.

OPERATION

The grip puller uses standard ASA wire rope and may be used in any position to lift, pull, lower or stretch heavy loads. Before attempting operation of this product, you should become thoroughly familiar with the warnings on page 3.

To operate the grip puller:

1. Place load cable(s) in the middle of the hook and inside the safety latch. **DO NOT** attach any cables outside the safety latch on either the puller hook or the wire rope hook.
2. Lay out the wire rope correctly without twisting. Twisting the wire rope reduces its strength. See Figure 5.
3. To send the wire rope forward, set the telescopic handle on the forward lever and move it back and forth.
4. To send the wire rope backward, set the telescopic handle on the reverse lever and move it back and forth.

IMPORTANT: A shear pin is installed in the forward lever. If the load being handled is too excessive for the puller's capacity, the shear pin is designed to break. If this occurs, **decrease the load or use other equipment of higher pulling capacity.** The broken shear pin is easily replaced using one of the spare shear pins which are found within the hand grip of the pullers. See Figure 1.

Before storing the grip puller:

1. After use, remove the wire rope from the main body by setting the clamp lever into the notch (disengage clamp), then pulling the wire rope from the inlet side at the rear of the puller.
2. After the wire rope is removed, push the clamp lever out of the notch and let it snap back to its original position. If the clamp lever is kept in the notch for an extended time period, its spring may become stretched.
3. Wipe off any sand or water from the puller body, including internal mechanisms, and the wire rope, then apply oil liberally to both.
4. Store the grip puller away from rain, dew, high humidity areas or around acidic chemicals, which will promote rusting.

MAINTENANCE

Make frequent and careful inspections of the puller. Make sure puller and wire rope are sufficiently oiled, and that they are free of any sand, dirt, dust or other obstruction or abnormality.

Make sure hooks are not deformed and that the puller body has not been warped or damaged.

Use care to prevent the wire rope from kinking. If the rope is left shaped like a basket or is kinked many turns at a single point, its strength is greatly diminished and may result in failure.

Replace the wire rope immediately if:

- The thickness of the rope becomes less than half of the original value due to abrasion.
- The rope exhibits basket-like shapes, kinks, or any abnormal deformation.
- The rope is given an exceptionally heavy shock during operation; this can fatigue the rope even if the load is within puller capacity.
- The entire rope is napped due to many small cuts.
- The eye section (thimble) of the wire rope becomes elliptical in shape.
- The clamp is deformed.

TROUBLESHOOTING

Trouble	Probable Cause	Remedy
Wire rope will not move in either direction.	Insufficient lubrication.	Oil the puller and wire rope.
	Puller is dirty.	Disassemble and clean out dust, dirt or other foreign matter. Oil the puller after reassembly.
	Clamp lever is not in proper position.	Release clamp lever from notch, and allow it to return to engaged position.
Wire rope will not advance during normal operation, or advances with great difficulty.	Clamp lever is not in proper position.	Release clamp lever from notch, and allow it to return to engaged position.
	Pawls are not lubricated.	Oil the pawl linkages properly; the pawls must engage the wire rope.
	Load is beyond puller capacity.	Decrease load.
	There is an obstruction within the wire rope's path.	Remove the wire rope; clean and oil the puller and the wire rope.
	The reverse lever is engaging the wire rope.	Check the position of the reverse lever. Correct as needed.
Clamp lever will not engage the wire rope properly.	Spring on clamp lever has become stretched.	Replace spring.
